Index important events

Event Tag lets you connect Lumana with third-party systems to index events and sync footage automatically to assist in future investigations.

Southwest warehouse

Time range: Omin — Any

Cameras: All cameras

Confidence: High confidence

Event tags: Pallet ID: 249, Employee scan

Accelerate investigations

Search millions of hours of video based on your Event Tag. Select your Event Tag in Lumana's Smart Search interface and find targeted footage in seconds.

Administration

API Keyname	Priority	Cameras
Unrecognized pallet	High	All warehouse
Missing inventory	Medium	All stock room
Missing pallet	Medium	All cameras
Late shipment	Medium	Bay 1-4
Stock arrival	High	Bay 1-4

Obtain greater visibility

Transform Lumana into a powerful operational tool. Quickly integrate with other systems using Lumana's API keys and turn data into relevant events.

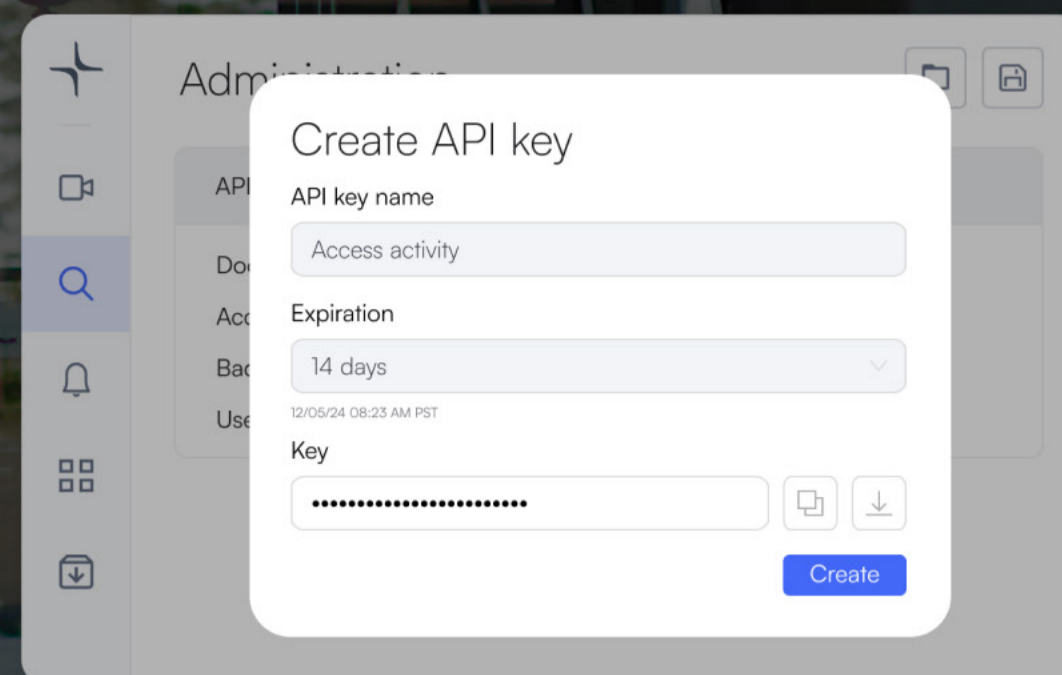

Set up instructions

Generate public API key

Navigate to the settings page in Lumana VMS+ to create an API key. Unique API keys are used to authenticate requests.

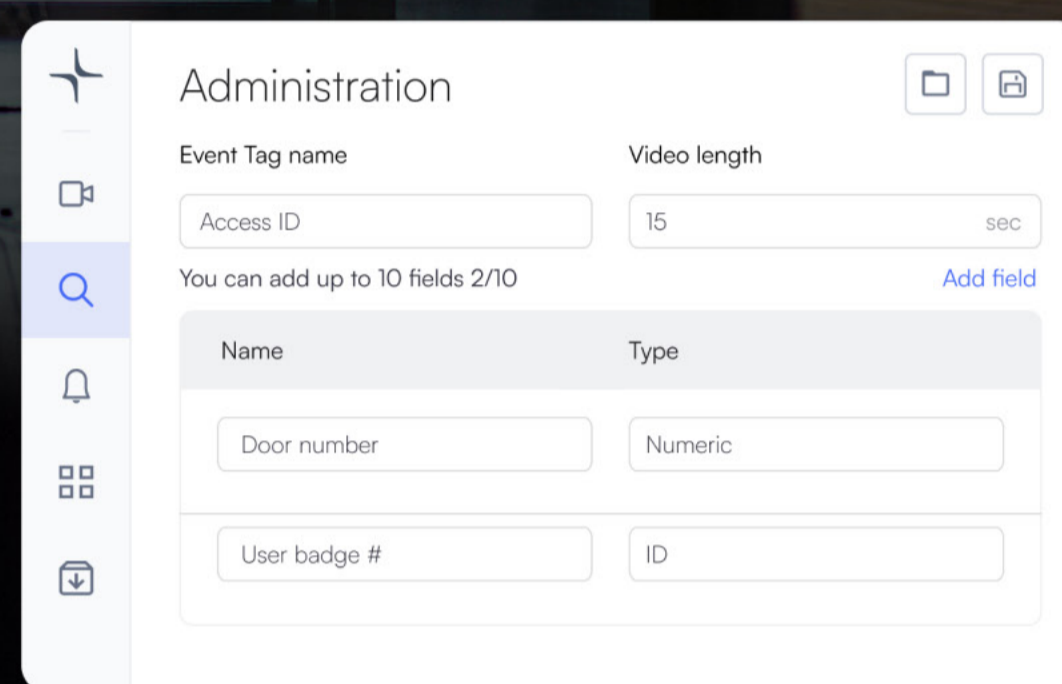

1

Configure event

Define your event by selecting the appropriate attributes. Event fields can be set up as an integer, decimal, text, or boolean.

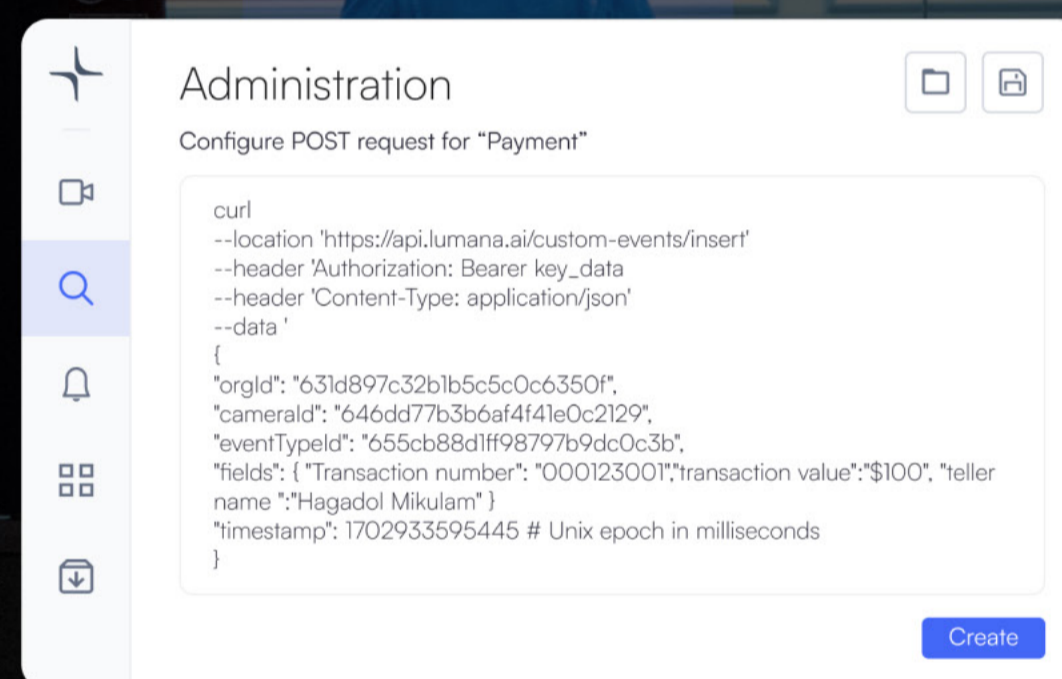

2

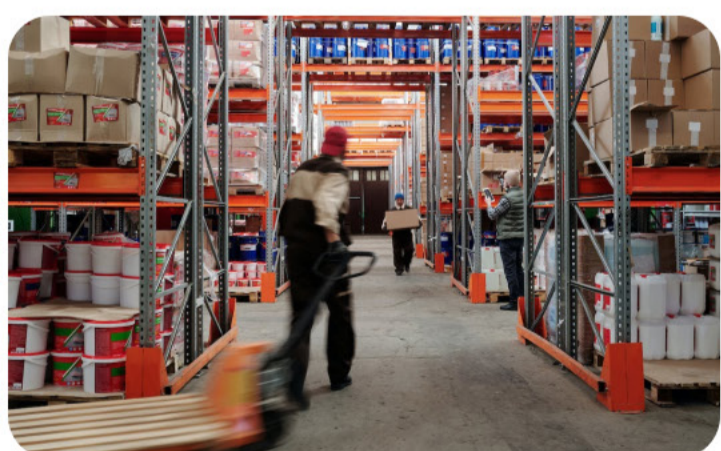

Create Event Tag

Ingest data from external systems by sending a POST request that matches your event configuration.

3

Use-cases

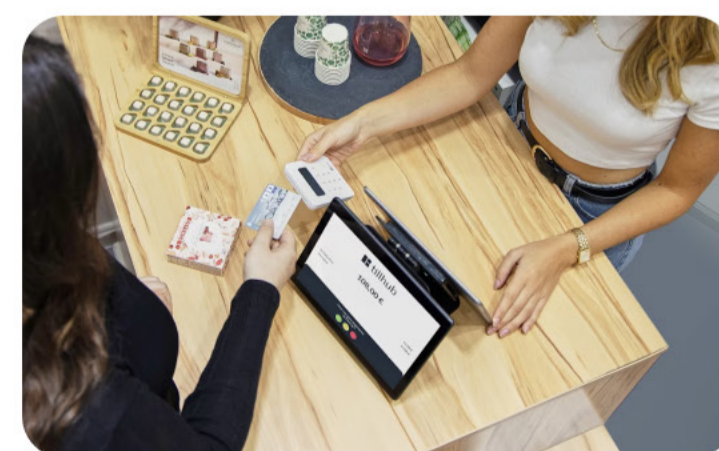

Warehouse operations

Search for video via pallet ID to monitor pallet status and operational efficiency.

Inventory management

Search for video via barcode scans to ensure new inventory is stored correctly.

Retail operations

Search for video via point-of-sale data to review suspicious transaction activity.
